

Weatherproof solar feeder for all pond fish

Suitable for: 💉 🛸

- Accurately feeds your pond fish the amount of food you set, up to 24 times a day (e.g. for juvenile fish), reliably and independent of the electricity supply. For all JBL pond foods or others, up to 9 mm diameter.
- Mount, programme feeding times and quantities (10 steps), fill with food and set throwing range to 0.5 or 1.0 m. Manual feeding possible
- Energy source selectable: use built-in solar panel with rechargeable battery or connect directly to power source via 5 m mains cable. With recessed grips for convenient handling
- Can hold up to 25 litres of food. Water temperature (important for the type of food) is indicated on the digital display by the included temperature sensor
- Package contents: ready-to-operate automatic feeder with solar panel, power supply and water temperature sensor. 2 red LEDs indicate low food in the container. Dimensions: 375 x 375 x 462 mm

Product information

An automatic feeder for pond fish has many advantages: Your koi and other pond fish are reliably supplied with food when you are away on holiday or on weekend trips. You decide when and how much the JBL automatic feeder has to feed. But you can also ignore the set programme at any time and start feeding manually. The selectable throwing range ensures that even the slightly smaller or weaker pond fish are fed.

The water temperature sensor (included), which you can position in any water depth up to 3 m, shows you the water temperature digitally on the waterproof display. So you can always select the right food to suit the prevailing water temperature. The JBL ProPond food concept has been developed to take the season, water temperature, living conditions and size of the fish into account.

The JBL ProPond AutoFood is completely weatherproof and rainproof.

For all JBL PROPOND pond foods and others, up to 9 mm diameter.
