

JBL Cu Copper Test

Quick test to determine the copper content

Suitable for:     

- Easy and reliable control of water values in aquariums/ponds. Determines the ideal copper value for the monitoring of heavy metals in the fresh and saltwater aquariums
- Laboratory comparator system to compensate any inherent water colouring: fill glass cuvette with sample water, add reagents to another cuvette, place cuvettes in holder, read values on colour chart
- When to use: for setting up a new aquarium: in case of invertebrates and fish deaths and when dosing copper-bearing medications
- Online Laboratory: free analysis and recommendations for the water values you have measured
- Package contents: 1 quick test, Copper test Cu. contents for approx. 50 measurements incl. 2 reagents, 2 glass vials with screw cap, syringe, comparator block and colour scale. Refill reagents available separately

Product information

Healthy aquariums/ healthy pond with conditions close to nature

The right water values are dependent on the fish stock and the plants in the aquarium/pond. Even if the water looks clear it can be contaminated. With bad values diseases or algae can appear in the aquarium/pond. To maintain a healthy aquarium/pond with conditions close to nature it is important to check and adapt the water values regularly.

For each water analysis JBL provides water tests in the form of quick tests or colour change tests. These determine a certain value or several values in one go. With these water tests you can recognise algae problems and negative nitrate, nitrite, potassium, magnesium values etc.

Why test?

Copper is a heavy metal which, on the one hand, is essential as a trace element for plant and animal organisms. On the other hand, excessive concentrations can have a devastating effect as a cytotoxin. Copper usually enters the aquarium by means of heavy metals in tap water or by metal objects in the water. And it enters ponds via guttering made of copper alloys. Good water conditioners can bind the copper. But copper can also be useful to combat fish disease.

JBL Online Laboratory

Regular control for a healthy aquarium with conditions close to nature. Enter your water values into the JBL Online Laboratory and get a in-depth analysis of your values within seconds.

Recommended copper content:

In general copper should NOT be measurable in aquariums and ponds. Any measured copper content in freshwater and marine water could be deadly!

Only copper containing medications should contain a therapeutic dose of 0.3 mg/l and this needs to be set and then checked with the Cu test.
