

Filter wool to remove all types of cloudiness

- Fast removal of all kinds of cloudiness in freshwater and marine aquariums: quality filter wool for aquarium filters
- Easy to use: select quantity of wool (suitable for all filters) as required. Insert as last filter stage. Removal required when water flow rate decreases.
- Crystal-clear water: filters off all types of cloudiness and particles. Although rinsing is possible we recommend exchanging it instead
- No release of pollutants and fibres fully synthetic, residue-free filter wool

aquarium filters

Product information

Filter materials serve multiple purposes:

They either filter suspended matter out of the water (mechanical filtering), provide settlement space for bacteria that break down pollutants (biological filtering), or remove harmful substances from the water

(chemical/absorptive filter materials).
The filter material should always be fitted from coarse to fine inside the filter, as fine filter material clogs too quickly at the beginning. A coarse filter sponge or filter ceramic (JBL Cermec) is ideal for the first filter stage. For biological filtering, JBL Sintomec and JBL Micromec provide the largest possible surface area for pollutant-degrading bacteria. Activated carbon (JBL Carbomec active and Carbomec ultra) filters out discolouration and medication residues. JBL NitratEx and JBL BioNitrat Ex filter out algae promoting nitrates. JBL PhosEx Ultra helps against algae-promoting phosphate. Silicat Ex ultra helps against silicic acid which promotes diatoms.

Filter floss should be used as the last filter material in external filters so that it does not get dirty too quickly. Only in multi-chamber biofilters can filter floss also be used as the first medium, as it is visible there and can be replaced in a few minutes. Filter floss cannot simply be washed out and should always be replaced during filter cleaning.

Absolutely safe

No pollutants released into the aquarium due to residue-free floss.
