

# JBL PROFLORA CO2 ADVANCED SET V

NEW

CO2 system (NO BOTTLE!) with gauges & solenoid valve

Suitable for:

- CO2 fertiliser system with solenoid valve for night switch-off. Provides the ideal supply for all aquarium plants in freshwater aquariums from 40 to 600 l while preventing algae
- Simple assembly: screw pressure reducer with mounted solenoid valve onto cylinder (not included), connect hose with bubble counter/check valve and reactor. Plug the solenoid valve into the timer (not included), set the bubble count - done
- For aquarists who already own a CO2 cylinder. No hose slippage thanks to hose screw connections, check valve prevents water from entering the cylinder
- The correct CO2 concentration in the aquarium water is checked via the display of the CO2/pH permanent test included and can be readjusted if required
- Package contents: pressure reducer with solenoid valve, 3 m hose, bubble counter with check valve, TAIFUN CO2 reactor + extension set, CO2/pH permanent test with reagents

## Product information

### Nutrition for aquarium plants

Plants provide the aquarium with vital oxygen for your aquarium inhabitants, prevent algae growth, remove pollutants, provide hiding places and reduce germs.

The JBL plant fertiliser systems supplies the plants with the main nutrient CO<sub>2</sub> through the water. The plants absorb this and convert it into sugar and oxygen in photosynthesis with the help of light.

### Easy to install

The system is ready for connection, except for the CO<sub>2</sub> cylinder, which is not included. Screw the pressure reducer onto the CO<sub>2</sub> storage cylinder and connect the hose coming from the solenoid valve to the bubble counter (incl. backflow protection) and then to the reactor in the aquarium. CO<sub>2</sub> thus enters the aquarium and is dissolved in the water with the help of the reactor. The CO<sub>2</sub> supply can be interrupted at night when a solenoid valve (night switch-off: not included) is connected. The CO<sub>2</sub>/pH Permanent Test permanently indicates the amount of CO<sub>2</sub> dissolved in the water and can then be readjusted if necessary.

The capacity of a CO<sub>2</sub> system depends on various factors. The carbonate hardness, the quantity and species of the plants and the strength of the water surface movement are decisive. A 500 g cylinder which is not switched off by a solenoid valve during the night lasts for about 4 months in its default setting. The recyclable CO<sub>2</sub> disposable cylinders can be purchased individually or in a cheaper 3 pack.

The pressure reducer included fits both the JBL refillable cylinders (M system, thread type W21.8x1/14) and the JBL disposable cylinders (U system, thread type M10x1).
