- Even release and effective distribution: special ceramic for very small CO2 bubbles, built-in ceramic diaphragm
- Even release and effective distribution: special ceramic for very small CO2 bubbles, built-in ceramic diaphragm
- High-quality glass design
- Package contents: mini CO2 diffuser ProFlora Taifun P Nano, incl. 1 suction holder

JBL ProFlora Taifun P

Product information

Ideal nutrition for plants

The right CO₂ concentration in the water is of great importance for the aquarium plants. Carbon dioxide is the main nutrient for plants and promotes their growth. Plants use the CO₂ for the photosynthesis and thus supply the water with essential oxygen. They prevent algae growth, remove pollutants, provide hiding places and reduce pathogens.

Even enrichment

The JBL diffuser supplies the aquarium water with the main plant nutrient CO₂ in even-sized bubbles. Easy to install The diffuser is suitable for all usual CO₂ systems. Connect to CO₂ hose with 4/6 mm. Attach diffuser with suction holder in the aquarium.

Effective

The built-in special ceramic ensures especially small and even-sized bubbles. Diffuser in high-quality glass design. The correct CO₂ amount varies from aquarium to aquarium and depends on the volume, the water movement and the planting of the aquarium. You can check the CO₂ content by means of a CO₂ test.
