

JBL PROFLORA u501

Plant fertiliser system complete kit

Suitable for:

- CO2 fertiliser system for best feeding of fast and slow growing plants in freshwater aquariums up to 400 l (max. 120 cm)
- Assemble system, attach diffuser in the aquarium and adjust CO2 supply that way that the permanent test indicates optimum value
- Professional water care: precise dosing with pressure reducer. Even release, effective distribution due to extendable diffuser. Monitoring: bubble counter with backflow stop and CO2/pH test. Residual pressure display on pressure gauge
- A hose screw connection means the hose cannot slip, a check valve prevents water entering the cylinder
- Package contents: ProFlora u501, incl. disposable 500g CO2 cylinder, fitting, pressure reducer, diffuser JBL Taifun, bubble counter, 3 m special hose, backflow stop, permanent test CO2/pH, 2x 100 ml liquid fertiliser, 1x JBL daily fertiliser

Product information

Nutrition for aquarium plants

Plants supply the aquarium with vital oxygen for your aquarium inhabitants, they prevent algae growth, remove pollutants, provide hiding places and reduce pathogens. The JBL plant fertiliser system supplies the plants with their main nutrient CO₂ through the water. The plants absorb this through their leaves.

Easy to install

The system comes completely ready to connect. Screw the pressure reducer onto the CO₂ storage cylinder. Use the hose to connect the pressure reducer to the diffuser in the aquarium. CO₂ thus enters the aquarium and is dissolved in the water with the help of the diffuser. The CO₂ supply can be interrupted at night by adding an interposed solenoid valve (not included).

Safe

Thanks to the check valve no water can enter the cylinder. The capacity of a CO₂ system depends on various factors. The carbonate hardness, the quantity and species of the plants and the strength of the water surface movement are decisive. A 500 g cylinder which is not switched off by a solenoid valve during the night lasts for about 4 months on its default adjustment.
