Product information

Ideal nutrition for plants
Carbon dioxide serves as the main nutrient for plants and thus promotes their ideal growth. Plants use
CO2 for photosynthesis and thus supply the water with essential oxygen. They prevent algae growth,
remove pollutants, offer hiding places and reduce pathogens. The correct amount of CO2 varies from
aquarium to aquarium and depends on the volume, the water movement and the planting of the
aquarium. With the JBL pressure reducer a precise dosage of CO2 is possible.

Easy to install

By using a size 6 Allen key (not included) the adapter can be screwed into the JBL pressure reducer. The conversion can be reversed at any time.
