

# JBL PROAQUATEST LAB Koi

Professional test case for koi and garden ponds

Suitable for: 

- Monitors the water values in ponds simply and reliably - determines pH 3.0 - 10, pH 7.4 - 9, carbonate hardness, general hardness, phosphate sensitive (low values), phosphate koi (high values), nitrite, nitrate, ammonium/ammonia, oxygen
- Easy to use: syringe accurately measures the amount of water, detailed instructions. Comparator system takes the inherent water colouring into account and makes colour comparison more precise
- With a professional ammonium test, the result of which shows the resulting ammonia content via a table (depending on the pH value)
- Childproof reagent bottles, waterproof plastic case, refillable kit
- Package contents: test case, incl. 22 reagents, glass vials, syringes, measuring spoons, thermometer, comparator block, plastic cuvettes, colour charts, pen, report sheets and operating instructions

## Product information

Don't guess - measure:

Get a regular update on whether all the important water values in your pond are OK or whether there is a need for action to correct values that are developing in the wrong direction. If problems arise (sick fish, plants not growing properly, water smells, algae problems) water analyses are really the only way to get to the bottom of it! As soon as you have found the cause with the help of the tests, you can correct it.

The tests are easy and quick to perform and provide accurate results.

The following tests are included in the test case:

pH test: acidity of the water from 3.0 to 10

pH test: acidity of the water from 7.4 to 9.0

GH test: determination of general hardness

KH test: pH stability of the water (carbonate hardness)

PO4 test Koi: determination of the phosphate content (reason for algae growth and plant nutrient)

Test NH4 / NH3: indication of non-toxic ammonium, determination of the toxic ammonia using table

NO2 test: determination of nitrogen compound nitrite, which is toxic for the fish

NO3-Test: determination of the nitrate content (reason for algae growth and plant nutrient)

The following water tests are available as supplements:

pH test: acidity of the water from 6.0 to 7.6

K test: determination of the plant nutrient potassium

Mg test Freshwater: determination of the plant nutrient magnesium

O2 test: determination of the oxygen content

PO4 test sensitive: phosphate test, which also indicates very low PO4 values

Fe test: determination of the iron content to monitor the fertilisation

Cu Test: heavy metal deadly for invertebrates

SiO2 test: determination of the silicates (silicic acid) as cause for diatoms

Almost all test reagents are available as environmentally friendly refill packs!
