JBL PROFLORA CO2 TAIFUN COUNT SAFE

CO2 bubble counter with built-in check valve

Suitable for:

- ■ The bubble counter makes the invisible CO2 gas visible and thus countable. The backflow protection prevents the water from flowing back

- ■ Fill bubble counter with water, connect with hose to CO2 system and diffuser, fix outside the aquarium with 2 suction cups on the glass or 2 screws on the furniture

- ■ The bubble counter allows you to control the CO2 supply: if there is too little CO2 in the water, the bubble count can be increased in a controlled manner

- ■ Safety: hose screw connections prevent accidental loosening of the hoses

- ■ Package contents: CO2 bubble counter with built-in check valve; holder with 2 suction cups/screws; dimensions: 105/175/40 mm

Product information

Ideal nutrition for plants
Having the right CO_2 concentration in the water is hugely important for aquarium plants. Carbon dioxide is the plants' main nutrient and it fully promotes their growth. Plants use CO_2 for photosynthesis and this supplies the water with essential oxygen. They remove pollutants, thus preventing algae growth, provide hiding places and reduce germs.
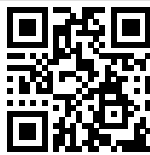

Easy to install
Fill the bubble counter with water. Use the hose to attach the bubble counter to the pressure reducer or solenoid valve of the CO_2 system and to the reactor in the aquarium (CO_2 system and diffuser not included). Fix the bubble counter outside the aquarium with 2 suction cups onto the glass or with 2 screws onto the furniture.

Safe
The bubble counter has hose screw connections and is easy to fill and clean thanks to a threaded connection with an O-ring. The correct CO_2 amount varies from aquarium to aquarium and depends on the volume, the water movement and the planting. To start, about 10 CO_2 bubbles per minute are recommended. The CO_2 content in the aquarium water can be checked with the help of a CO_2 test (JBL PROAQUATEST CO_2-pH Permanent).

The CO_2 bubbles are easy to count
A magnifying glass section in the transparent part makes it easier to count the bubbles for a precise dosing of the CO_2 quantity.
