

JBL PRONOVO DAPH

NEW

Water fleas as a treat for ornamental fish from 3-10cm

Suitable for: 

- Sun-dried water fleas (Daphnia) as an ideal food supplement for healthy ornamental fish
- Water fleas contain a lot of dietary fibre, are therefore very healthy and are happily eaten by all ornamental fish species
- Natural sun-drying process, for the preservation of the valuable ingredients
- No water cloudiness: better water quality due to improved digestibility of the food, which reduces fish excretion
- Package contents: original sealed, air- and light-tight, recyclable tin with dosing aid in the lid

JBL PRONOVO DAPH

Product information

In the past, almost every aquarium owner caught water fleas in the wild and fed them to their fish. Today this is often prohibited for nature conservation reasons and many waters are now so heavily polluted that it is no longer safe to catch food animals. JBL uses trustworthy suppliers who have legal access to absolutely clean waters with safe water flea populations. The water fleas are preserved by sun drying and packaged immediately after they are caught. In this way, their valuable ingredients and dietary fibres are preserved to benefit the diet of the ornamental fish.

Water fleas (Daphnia): They grow to 1-5 mm in size and belong biologically to the Branchiopoda and thus to the freshwater plankton of stagnant waters. They do not belong to the gammari, which grow up to 2 cm long, look completely different, tend to live in flowing waters and belong to the amphipods. Cyclops, on the other hand, are much smaller (0.5-1 mm) and belong to the copepods.

To expand the diet of ornamental fish, supplementing their main diet with freeze-dried foods is highly recommended. The following types of food are available for this purpose: JBL NOVO DAPH (water fleas), JBL NOVO ARTEMIO (brine shrimps), JBL NOVO FEX (tubifex), JBL NOVO FIL (red blood worms).
