

JBL PROSCAPE PLANT SOIL BEIGE

Beige substrate for aquascaping

Suitable for:    

- Complete nutrient substrate for aquatic plants: special substrate for aquascaping aquariums
- Thriving plant growth: ideal oxygen supply and circulation due to medium grain size
- Immediate nutrient and mineral supply for plants
- Tropical water values: slightly acidic pH values and low carbonate hardness. Reduces water hardness – water becomes soft
- Contents: 1 bag ProScape PlantSoil Beige

JBL PROSCAPE PLANT SOIL BEIGE

Product information

Underwater gardeners

Aquascaping is the term used to describe the technique of designing aquarium landscapes. This is the place for plant compositions, for the reproduction of a landscape above water or for natural biotopes. An aquascaping aquarium contains no or few fish and invertebrates. This way the nutrient supply for plants is reduced and their growth is limited. Nitrogens, phosphorus and other minerals become scarce substances and need precise re-dosing. The plants need light, CO₂ and the right nutrients for their healthy growth in a beautiful underwater landscape.

Rich in minerals

ProScape soils are dedicated substrates which have been especially adapted to the requirements of aquascapers. Soils are not neutral to water, but have a softening effect. They make the water softer and acidify the water just enough to slide the pH value slightly into the acidic range. The JBL PlantSoils are rich in nutrients and immediately supply the plants with both nutrients and minerals, whereas ShrimpsSoils are lower in nutrients.

Use:

Rinse the substrate briefly in tap water to wash away any abrasion caused in transport. To avoid accumulation of minerals in the water, carry out a 50 % water change every 2 to 3 days in the first two weeks after filling. The softening effect decreases in the course of time because the influence of the water values depend on the input water values and the intervals between the water changes.
