Product information

Crystal-clear and healthy water

Poor light conditions, over-fertilisation or even a surplus of nutrients can have negative effects on the aquarium water and may promote algae growth. Floating algae lead to green, bacteria to white clouding. The JBL water clarifier eliminates clouding caused by bacteria and floating algae. The aquarium water passes through the sturdy UV-resistant casing of the clarifier. The UV-C radiation kills off bacteria, other germs and floating algae as the water passes through. The efficiency of this UV-C water clarifier is particularly high, since the glass cylinder is surrounded by a reflecting stainless steel foil which reflects the UV-C radiation, thus doubling the efficiency. This can also help to eliminate persistent algae, such as thread algae, since their spores are also largely killed off.

No harmful side effects

No change to the water values / no negative influence on the essential cleansing bacteria in the filter.

Easy to install

Connect the water clarifier to the external filter or a separate water pump. Thanks to the 90° elbow included in the pack, any installation position is possible.

Safety

The JBL UV-C Water Clarifier is TÜV tested and has a safety switch for an automatic switch off when the device is opened. The casing is UV-resistant and has sturdy walls. It is equipped with a LED lamp which indicates whether the UV-C lamp is working.
