

Professional feeding for small fantails and other goldfish breeds with JBL GoldPearls *mini*.

GB

JBL GoldPearls *mini* contains a balanced combination of high-quality nutrients in a new pearl form, specially balanced to meet the needs of fantails, lionheads etc. in the aquarium. By sinking, the pearls avoid the problem of the fish taking in air when eating. Valuable proteins, wheat germ and other vegetable raw materials promote strong growth. Vital vitamins, unsaturated fatty acids and carotinoids enhance brilliant colouring and increase resistance to disease.

Feeding recommendations:

Give small portions which are eaten in a few minutes several times a day.

Staple food - With antioxidant E 306 (nat. vit. E extracts)
