

## **UK** Tropical almond leaves

### **Natural water conditioner**

- Natural water conditioner and mucous membrane protection by replicating the natural habitat of our aquarium inhabitants.
- Promotes well-being, vitality and readiness to spawn.
- Vital for the care and breeding of Betta species.
- Tannins thicken mucous membranes and prevent disease.
- Harvested straight from the tree, cleaned, smoothed and sun-dried.

**Instructions for use:** Add directly to the aquarium, using 1 leaf per 50 - 100 l water. The leaf sinks to the floor after one to two days. The effective ingredients are released over one to three weeks. At this point, a new leaf can be added. The old leaves can be removed or left in the aquarium as a food supplement for plecos and shrimps. Unlimited shelf-life if stored in a dry place. Variations in size, colouring and shape are natural and not a defect.

**Contents: 10 leaves**
