

Use:

When?

- when installing a new aquarium
- after cleaning filter
- after using medications
- after each change of water

How?

Dampen filter material with aquarium water, shake the bottle vigorously and pour the complete contents over the filter mass or directly into the aquarium water. Start up the filter. In order to protect the cleansing bacteria, fresh water in the aquarium should be treated with JBL Biotopol at least one hour **before** JBL FilterStart is used.
