

**Professional feeding of fantails and
other breeds of goldfish with JBL
GOLDpearls**

JBL GOLDpearls contains a combination of nutrients in a new pearl-type form, specially attuned to the feeding requirements and habits of long tailed goldfish and other breeds of goldfish kept in aquariums. Valuable ingredients including spirulina algae, wheatgerm and a variety of vegetable raw materials help to keep these fishes healthy and thriving. Vital vitamins, unsaturated fatty acids and carotinoids promote resistance, lively colouring and ensure healthy growth.

Ingredients: cereals, fish and fish by-products, crustaceans, algae (10 % spirulina); vegetables and yeasts.

Feed several times a day in small portions which should be consumed within a few minutes.

Complete pet food - no artificial colouring

Contains E 306 antioxidant
