Product information

Nutrition for pond plants

Healthy plants are important for every pond. Plants provide the pond with vital oxygen for the dwellers, prevent algae growth and remove dangerous substances. Furthermore plants provide places to withdraw and reduce pathogens.

For the development of the plants the following demands need to be met:

Light as energy source for the photosynthesis / CO₂, nutrients and trace elements as growth promoters – FRESH GROWTH VIGOUR – JBL fertilisers supply water lilies and marsh plants with all the main nutrients, iron and essential trace elements in a depot form.

This way the plants get all the nutrients they need to absorb over the leaves and roots to prevent deficiency symptoms (e.g. iron deficiency).

Easy to use

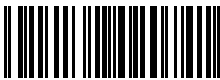

Depending on the size of the plants, 1 – 3 balls per plant and per season are quickly pressed into the pond bed near the plant roots .
