## Product information

Clean pond water – optimal water quality

Water cloudiness can be caused by algae, fish excrements or other wastes. JBL's trouble shooters have been specially created for all types of water cloudiness and treat the pond water without any harmful side effects for the dwellers.

JBL's zero-risk concept

Algae can pollute the pond water and thus cause damage to the fish and the plants in the pond. In collaboration with scientists JBL has developed a concept for a permanent removal of algae.

"1-2-3 algae-free"

Stabilise the water: increase the mineral content for anti-algae agents (JBL StabiloPond) to work more effectively  
 Combat algae: add a suitable anti-algae agent (JBL AlgoPond) into the water  
 Limit nutrients: remove the nutrients of dying algae (JBL PhosExPond)

PhosEx Direct is easy to use

Determine the required quantity. Mix with pond water in a watering can and spread it evenly over the pond. Use preventatively every six weeks and after each algae combat. Do not pour on floating water lily leaves. Do not bathe in swimming ponds for 24 hours after use.

Dosage 40 ml per approx. 800 l pond water.
