

JBL NovoFil

Red blood worms for fastidious aquarium fish

Suitable for:

- Alternative to live and frozen food: supplementary diet for fastidious tropical freshwater fish and turtles. Drying process is gentle on the nutrients
- Nutritious and easy to digest: ideal feeding conditions for fish species from 5 to 20 cm in all water layers
- No water clouding: better water quality thanks to better digestibility of the food, which reduces the fish excrement
- Fish choose JBL food: 98.5% of all fish species ate the JBL food immediately during research expeditions in freshwaters. No processing of cheap fish meal, fish meat from fish fillet production for humans is used
- Contents: supplementary food, for aquarium fish. After opening use up within 4 months. Unopened storable for 3 years in high-quality packaging with foil seal

Product information

Animal welfare is important to us

For years JBL has supported the largest international organisation for the protection of sharks "Shark Project".

Other good reasons to use JBL fish food:

- Optimal protein/fat ratio
- Impressive acceptance on the part of fish: research expeditions with fish feeding trials in the wild
- Very slight vitamin loss due to airtight sealed packaging

Ahead through research

The results of the JBL research expeditions, combined with the expertise of the JBL research and development team, has resulted in optimal and balanced food mixtures made of high-quality ingredients.

Feeding recommendation

Feed 1 – 2 times a day, as much as can be eaten within a few minutes.

Unopened the food tins can be kept for 3 years, after opening use up within 4 months, since valuable vitamins will deteriorate. Choose the size of the tin (100 ml, 250 ml) in accordance with the monthly consumption stated above and the number of the fish in the aquarium.

In addition to main foods further supplementary foods in the JBL range are available.
