

JBL NovoBaby

Rearing diet set for fry

Suitable for:

- Complete nutrition and ideal growth: rearing food set for live-bearing fish species
- Nutritious, easy to digest and strengthening the immune system thanks to vitamins and the biological trace element inositol. Ideal feeding conditions thanks to three foods and food sizes for the rearing of newborn live-bearing fish up to 30 mm in size in all water layers
- No water clouding: reduced algae growth thanks to balanced phosphate content, better water quality due to better digestibility of the food, which reduces fish excrement
- Fish choose JBL food: 98.5% of all fish species ate the JBL food immediately during research expeditions in freshwaters. No processing of cheap fish meal, fish meat from fish fillet production for humans is used
- Contents: NovoBaby, rearing diet set for aquarium fish

Product information

Animal welfare is important to us

No processing of cheap fish meal, only fish meat from fish fillet production is used. Our motto is: The large fillet for humans and the small fillet for our aquarium fish.

For years JBL has supported the largest international organisation for the protection of sharks "Shark Project".

The composition of the ideal rearing feed for young fish depends on many factors. The juvenile fish are growing and need important nutrients for their development. Essential vitamins and the biological trace element inositol are necessary to strengthen the immune system. JBL's rearing food consists of three different food sizes:

1. Very fine food for new-born live-bearing fish species up to 15 mm in size
2. Fine food for new-born live-bearing fish species from about 15 to 30 mm in size
3. A coarser food for new-born live-bearing fish species from about 30 mm upwards in size

Ahead through research

The results of the JBL research expeditions, combined with the expertise of the JBL research and development team, has resulted in optimal and balanced food mixtures made of high-quality ingredients.
