

Multivitamin drops for aquarium fish

Suitable for:

- Multivitamins prevent deficiency symptoms and increase the resistance of freshwater and marine fish
- Healthy fish: a special emulsifying process with lecithin ensures the full effectiveness of the fat-soluble
- To use: drip multivitamins on frozen, live, freeze-dried or dry food
- Many diseases are caused by a weakened immune system. The additional vitamin supplement strengthens the immune system of aquarium or pond fish
- Contents: 1 bottle Atvitol, 50 ml with dropper

Country: Serbia

Language: English

Product information

Healthy fish –healthy aquarium Not only humans can suffer discomfort, fish can too. Transport is a common trigger for stress in fish. Bad water values in the aquarium can be the reason for bacteria, fungi and parasites.

Vitamin deficiency can be a big problem for fish nutrition. Flake and granulate foods lose most of their vitamins 3 months after the seal is broken. Frozen food is scarce on vitamins. That's why fish need to be fed vitamins regularly to increase their resistance to diseases.

Tip: If the vitamins are added to the water instead of the food, this is best done with the lighting switched off, as many vitamins are destroyed by light.
