JBL ProFlora T3 BLACK

Product information

Nutrition for aquarium plants

Plants provide the aquarium with vital oxygen for the aquarium dwellers, prevent algae growth, remove pollutants, provide hiding places and reduce pathogens. The plants are supplied with the main nutrient CO₂ using a plant fertiliser system via the special hose. They absorb this through their leaves.

Loss-free enrichment

The special CO₂-proof hose ensures a loss-free CO₂ enrichment of the water. Air hoses are unsuitable for CO₂ systems.
