Product information

Clear and healthy water

Good water quality is necessary to ensure the health of fish and plants in the aquarium. This can be achieved with various aquarium filters.

High biological breakdown performance

The filter system is especially suited for aquariums with fry and shrimps. The animals find their food on the filter and there is no risk of them being sucked into the filter. The slow water flow promotes a high level of biological breakdown. The T-shaped filter material provides a large surface for cleansing bacteria and a long service life with good water flow.
