

JBL NanoPrawn

Main food for shrimps in small aquariums

Suitable for:

- Complete nutrition, ideal growth and vibrant colouring for invertebrates: with spirulina algae and nettle
- Ideal feeding conditions thanks to floating and sinking granulates for shrimps from 2 to 10 cm in size
- No water clouding and water-stable: water-stable food pearls
- No processing of cheap fish meal, fish meat from fish fillet production for humans is used
- Contents: main food, for shrimps in nano aquariums. After opening use up within 4 months. Unopened can be stored for 3 years in high-quality packaging with foil seal.

Product information

Animal welfare is important to us

No processing of cheap fish meal, uses fish meat from fish fillet production with the motto: The large fillet for humans and the small fillet for our aquarium fish.

For years JBL has supported the largest international organisation for the protection of sharks "Shark Project".

Other good reasons to use JBL fish food:

- The use of pure fish protein without cheap fish meal
- Optimal protein/fat ratio
- Mainly proteins from water animals
- Reduction of algae growth and optimum fish growth thanks to adapted phosphate content
- Impressive acceptance on the part of fish: research expeditions with fish feeding trials in the wild
- Very slight vitamin loss due to airtight sealed packaging

Ahead through research

The results of the JBL research expeditions, combined with the expertise of the JBL research and development team, has resulted in optimal and balanced food mixtures made of high-quality ingredients.

Feeding recommendation

Feed 1 – 2 times a day (also at night, if required), as much as can be eaten within approx. 20 minutes.

Unopened the food tins can be kept for 3 years, after opening use up within 4 months, since valuable vitamins will deteriorate.
