Product information

Clean and healthy water Plant and food remains and metabolic substances lead to a deterioration of the quality of the water in the aquarium. Good water quality is necessary for healthy fish and plants. This can be achieved with aquarium filters. The filters suck in the aquarium water and remove the pollution and waste materials from the water. Filters also offer an ideal habitat for bacteria which decompose harmful substances.

Increase of oxygen content
The water outlet set with rotatable spray bar ensures that the water flows back from the internal filter into the aquarium. With this procedure the oxygen content can be increased. One or both spray bars can be used depending on required spray strength.

Easy to install Simply plug the spray bar onto the outlet of the internal filter. The outlet set is also suitable for 12/16 mm hose connections.
