

Phosphorus plant fertiliser for aquascaping

Suitable for:

CARE

PFLEGE **ENTRETIEN** 

- Additional care for plants: supplementary phosphorus fertiliser for aquascaping aquariums
- Use for high power light aquarium: 2 ml/100 l, for weakly lighted aquariums: 1 ml/100 l
- Thriving plant growth, prevents phosphorus deficiency: contains additional plant-available potassium
- Checking of dosage with JBL phosphate test sensitive
- Package contents: 1 bottle ProScape P Macroelements. Example of use: 2 ml/100 l daily in high power light aquariums with CO2; 2 ml/100 l weekly under weak light conditions without CO2

Product information

Underwater gardener Aquascaping is the term used to describe the technique of designing aquarium landscapes. This is the place for plant compositions, for the reproduction of a landscape above water or for natural biotopes. An aquascaping aquarium contains no or few fish and invertebrates. This way the nutrient supply for plants is reduced and their growth is limited. Nitrogens, phosphorus and other minerals become scarce substances and need precise re-dosing. The plants need light for their healthy growth in a beautiful underwater landscape, CO2 and the right nutrients.

Please use the dosing calculator at www.proscape.de, to determine the exact fertiliser amount by taking into account the initial values of the aquarium water.
