## Product information

Information on CO<sub>2</sub>-carrying hoses: Not every material is suitable for conducting CO<sub>2</sub> gas, because many plastics are suitable for air but are permeable to CO<sub>2</sub> gas. This is because CO<sub>2</sub> diffuses differently to air. That's why air hoses are unsuitable for CO<sub>2</sub> systems. The plastic used for JBL PROFLORA T3 hoses is suitable for CO<sub>2</sub> and fits all common CO<sub>2</sub> systems.

Install the hose connections so that they are as short as possible. The shorter the CO<sub>2</sub>-carrying hoses, the faster the whole system will react when you increase or decrease the pressure at the fine needle valve. But even with short hoses your settings will always have a delayed reaction. So don't wildly turn the fine needle valve of the pressure reducer: adjust it slightly and wait a little before the number of bubbles in the bubble counter (JBL PROFLORA COUNTSAFE) changes.

CO<sub>2</sub> hoses also harden over time and should then be replaced. JBL offers special CO<sub>2</sub>-resistant hoses: JBL PROFLORA T3.
