

JBL PROSCAPE PLANT START

Soil activator to start plants quickly

Suitable for: 

- For vigorous plant growth: live bacterial cultures make the nutrients available to the plants and promote the aquarium plants' root development
- For an initial setup: spread it over the nutrient substrate or first soil layer and cover with substrate
- Reduces external germs and blue-green algae (cyanobacteria) colonisation. Optimises nutrient uptake of the plant roots by a bacterial breakdown of the minerals in the soil. Plants grow quicker
- Further benefit: mixed bacterial culture for the breakdown of organic waste at the bottom. Transforms the substrate into an additional filter
- Contents: 2 individually sealed metallized bags, each with 8 g mineral granulate with live bacteria cultures for soil activation in aquariums from 20-100l

JBL PROSCAPE PLANT START

Product information

Aquatic plants are useful for each aquarium since they withdraw nutrients from the water and are thus effective against algae.

When plants are initially inserted it takes quite a while until they have formed roots strong enough to anchor them well at the bottom. With JBL PlantStart you reduce this firm rooting time and the plant growth starts almost immediately.

The special bacterial mixture (mixed culture) makes the intake of nutrients and trace elements easier for the plants. The precipitated iron III is transformed into iron II which is accessible to the plants.

Another benefit of JBL PlantStart emerged in tests: the bacteria form an initial colonisation on the substrate fairly quickly and break down organic material. This way even a newly added substrate becomes a functioning additional filter in an extremely short time. Using the biofilm formed JBL ProScapc PlantStart reduces the colonisation of blue-green algae (cyanobacteria).

Features	
Product name	JBL PROSCAPE PLANT START
Art. No.	2302500

Features	
Animal species	Armored catfish, Arowana, Axolotl, Barbels, Bettas, Bichirs/ reedfish, Blowfish, Catfish, Cichlids (South America), Clawed frogs, Clawed shrimps, Crayfish, Crustaceans, Danions, Discus, Dwarf crayfish, Dwarf shrimps, Flowerhorn, Gill maggots, Goldfish, Gouramis, Guppy, Juvenile fish, Killifish, Livebearers, Loaches, Mussels, Newts, Panchaxes, Rainbowfish, Snails, Spiny eels, Tetra, Veiltails, blood parrot cichlids, freshwater butterflyfish
Animal size	-
Animal age group	-
Volume of habitat	-
Material	Up to 1% of various strains of water cleaning bacteria (pseudomonas, xanthomonas, arthrobacter, micrococcus, nitrosomonas and others) are coated on solid mineral carrier material. All bacteria belong to the risk class R1. Rest = mineral granulates
Food type	-
Colour	brown / natural
Dosage	8 g for aquariums with 20-50 l
Transport conditions	-
