JBL PRONOVO NEON GRANO XXS

NEW

Granulated staple food XXS for all 1-3 cm characins

Suitable for:

- Prebiotic & sinking aquarium fish food: dedicated dietary fibres in the food supply the beneficial intestinal bacteria with nutrition for healthy digestion. Healthy digestion means less excretion and therefore less water pollution
- Natural raw ingredients without artificial additives for a natural diet and healthy aquarium fish. Tested on JBL research expeditions in South America with free-living characins
- Very high acceptance even with choosy characin species thanks to high-quality raw ingredients such as salmon, shrimps, spirulina and insects. Adapted to the natural food spectrum, which consists predominantly of plankton
- With the very high-quality natural astaxanthin from krill and spirulina, which ensures perfect colour formation in neons and other characin species
- Package contents: original sealed, air-tight and light-proof, recyclable tin with click doser as a feeding aid or in a 20 g freshlock bag

JBL PRONOVO NEON GRANO XXS

Product information

The biological species concept for ornamental fish:
In addition to a staple food such as JBL PRONOVO BEL for community aquariums, your fish can also be fed with foods from the JBL PRONOVO species concept. Within the species concept, you can add food specifically suitable for particular fish species or select alternatives for the main food. It's no problem if, for example, your neon also eats the food for your small barbels and vice versa. It is only important that you offer the right food for each group of fish. Variety is always good!

Would you like your neons or pencil fish to feed on the absolute best food? No problem: in the JBL species concept you will find bite-sized granulates for neons (and other small characins) whose composition is precisely adapted to the needs of the fish, including insects: the JBL PRONOVO NEON. In their natural habitats in South America, neons live in very nutrient-poor blackwater biotopes and are dependent on small bite-sized plankton. With a protein/fat ratio of 6.5:1, the natural diet of small characin species is taken into account. Their food, mainly plankton animals, is filled with vegetable ingredients. JBL PRONOVO NEON therefore also contains a relatively large amount of vegetable ingredients. The proportion of insect protein fits in perfectly with their diet, as insect larvae form part of their food spectrum.

The right food size:
A very important aspect of correct feeding is the right food size for the mouth. It is especially important with small fish species that the animals get the food morsels into their mouths, as they cannot bite pieces off. If you are unsure when faced with two food sizes, always choose the smaller one. Predatory fish species cope much better with larger food chunks, as "too large" food chunks are also included in their food spectrum.
