

# JBL PRONOVO BEL GRANO BABY

NEW

Rearing diet for juvenile fish in the aquarium

Suitable for:

- Complete nutrition, optimal growth and beautiful colours thanks to brine shrimps. Powder food set with 3 pouches of different food sizes for juveniles of all aquarium fish
- Nutritious and easy to digest: ideal nutrient composition for all baby aquarium fish from 5 to 20 mm in size
- No water clouding: reduced algae growth thanks to balanced phosphate content, better water quality due to better digestibility of the food, which reduces fish excrement
- Natural raw ingredients without artificial additives for a natural diet and healthy aquarium fish
- Package contents: 3 original sealed, air- and light-tight, recyclable freshness pouches with separate dosing spoon as feeding aid

# JBL PRONOVO BEL GRANO BABY

## Product information

The composition of the ideal rearing feed for young fish is based on a variety of factors. The juvenile fish are growing and need important nutrients for their development. Essential vitamins and the biological trace element inositol are necessary to strengthen their immune system. With young fish it is very important that the food size fits their mouth size. It is better to have a food that is too small than one that is too large! The appropriate phosphate content of the food is essential for healthy bone formation. Not enough phosphate and calcium will lead to bone deformities.

Once the young fish are big enough, a supplement of live Artemia (brine shrimps) is ideal. JBL offers a complete programme for this = JBL Artemio.

A distinction is made between juveniles of egg-laying and viviparous species. The young fish of egg-laying species are much smaller after hatching and initially feed on infusoria (microorganisms) that they find in their environment. Many species then also accept liquid food (JBL PRONOVO BEL FLUID). Shortly afterwards they will accept fine powdered food (JBL PRONOVO BEL GRANO BABY or the powdered food from the first bag of JBL PRONOVO BEL FLAKES BABY). As soon as they have grown a little more, you can switch to the second bag of JBL PRONOVO BEL FLAKES BABY. If the parents are brooders (as with cichlids), a long pipette or a piece of hose helps to bring the food dissolved in water directly to the young fish. A little later you can change to the third bag. In this way the right food size is available for all sizes of young fish.

In viviparous or even mouth-breeding species the young fish are larger and immediately eat the food from the second bag of JBL PRONOVO BEL FLAKES BABY and live Artemia (JBL Artemio System).

## Product details

Article data	
Product name	JBL PRONOVO BEL GRANO BABY 3 x 10ml
Art. No.	3112500
EAN number	4014162311252
EAN as barcode	
Content	30 ml
Weight	3 x 2.5 g = 7.5 g
Expiry months	36
RRP incl. VAT	8,05 €
Base price	1073.33 €
Nominal filling quantity	7.5 g
Base quantity	1 kg
Gross weight	22.06 g
Net weight	7 g
