

JBL PRONOVO TAB M

NEW

Food tablets for all aquarium fish from 1-20 cm

Suitable for:

- Ideal for all bottom-dwelling fish species and also all others when the tablet is attached to the pane
- Use: either let it sink to the bottom of the aquarium or attach it to the aquarium glass with light pressure from the inside
- Natural raw ingredients without artificial additives for a natural diet and healthy aquarium fish. Tested on JBL research expeditions in South America
- Very high acceptance even with choosy fish species thanks to high-quality raw ingredients such as shrimps, salmon and tubifex. Krill creates a high level of acceptance among all fish and at the same time ensures beautiful colour formation
- Package contents: original sealed, air- and light-tight, recyclable tin with dosing aid in the lid (for 100 ml, 250 ml, 1000 ml)

JBL PRONOVO TAB M

Product information

Bottom-dwelling fish tend to seek their food at the bottom and so sinking food tablets are ideal for them. Sinking granulate food for the other fish will also reach the bottom, but really only if too much has been fed! It therefore is useful to feed the free-swimming and bottom-dwelling fish species separately.

The biological species concept for ornamental fish:

The nutritional requirements of bottom-dwelling fish are also different:

Almost all bottom-dwelling fish species eat JBL PRONOVO TAB. But even the free-swimming fish species quickly learn by smell that the tablet consists of food. Very large fish eat them whole, smaller ones bite off. Once the tablet sticks to the glass, all the fish enjoy eating it and it's great fun to watch.

Among the sucker catfish there are many species which feed mainly on plants (e.g. bushymouth catfish, *Ancistrus dolichopterus*). JBL PRONOVO PLECO was developed for these species. But even among the sucker catfish there are species such as the zebra pleco (*Hypancistrus zebra* = L 46) or the cactus catfish (*Pseudacanthicus cf. leopardus* = L 114) which, although not predatory, do not eat plants but animal food.

Armored catfish have quite an extensive food spectrum. The JBL PRONOVO CORYDORAS (Corydoras = scientific name of the armored catfish genera) contains the appropriate raw materials, such as shrimps and spirulina. Armored catfish need a varied diet for healthy nutrition. Shrimps are representative of all small animal organisms including carrion, which the armored catfish feel on the ground with their barbels. Loaches tend to be omnivorous. They like to eat snails, and sometimes aquarium plants as well. JBL PRONOVO BOTIA was designed for their diet.
