JBL PROCLEAN AQUA IN-OUT EXTENSION

Extension hose for JBL PROCLEAN AQUA IN-OUT

Suitable for:

- If the 8 m water hose in the JBL PROCLEAN AQUA IN-OUT is not enough, we offer an 8 m water hose extension set
- For the extension: pull the original hose off the gravel cleaner, screw on the hose connector provided and insert the hose piece in between
- The hose connector provided contains a hose locking nut on each side to securely fasten the hoses
- This extension set fits all 12/16 hoses
- Package contents: 8 m 12/16 hose, 1 hose connector incl. hose screw locks

JBL PROCLEAN AQUA IN-OUT EXTENSION

Product information

This 8 m extension set is actually intended for the water changing set JBL PROCLEAN AQUA IN-OUT, but can also be used for any other 12/16 hose. It also fits the previous model: JBL Aqua In-Out.

Regular water change
Food, plant remains and metabolic products pollute the aquarium water. Since aquarium filters can't completely remove these substances from the water and a large part of the waste enters the aquarium bottom, a regular partial water change (about every 2 weeks 1/3 of the water content) needs to be carried out. Always siphon off the waste from the substrate when carrying out a partial water change. After the partial water change a good water conditioner such as JBL Biotopol is vital to prepare the new tap water for fish.

How to clean the aquarium bottom properly:
Push the gravel cleaner (JBL PROCLEAN AQUA IN-OUT or JBL PROCLEAN AQUA EX) into the aquarium substrate with twisting movements. The suction pulls the substrate and the dirt in the gravel cleaner upwards. The substrate falls back down under its own weight and only the dirt is sucked out of the aquarium. With fine sand, you can adjust the suction by lifting the gravel cleaner so that the light sand also falls back down.
If you have a long-term substrate fertiliser under the covering gravel layer (e.g. JBL PROFLORA AQUA BASIS), do not insert the gravel cleaner far. Insert it only as deeply as the covering substrate layer is thick.
