

JBL PROFLORA CO2 TAIFUN SPIRAL 10

Expandable CO2 reactor for freshwater aquariums

Suitable for: 

- Loss-free enrichment of the main plant nutrient carbon dioxide: CO2 reactor for freshwater aquariums from 40 to 400 l from a height of 20 cm
- Easy to install: use the special CO2 hose to connect the reactor to the CO2 fertiliser system (not included), use the suction holders to position the reactor in the aquarium
- Visible and efficient diffusion of CO2, operation without additional pump, no separate bubble counter necessary, easy to clean, completely dismountable, suitable for all common CO2 systems, expandable
- Collecting cap to compensate CO2 loss, sturdy Makrolon, up to max. 400 l at 4°KH, up to 200 l at 10°KH
- Package contents: CO2 high diffusion reactor with 10 modules + bottom module with hose connection + collecting cap module on top, 4 holding clips with suction cups, 2 m special CO2 hose, height 19 cm

JBL PROFLORA CO2 TAIFUN SPIRAL 10

Spare parts

JBL Suction cup with clip 37 mm

Rubber suction cup with clip
for objects of 37-45 mm

JBL PROFLORA CO2 TAIFUN SPIRAL 10

Product information

Ideal nutrition for plants

Having the right CO2 concentration in the water is hugely important for aquarium plants. Carbon dioxide is the plants' main nutrient and it fully promotes their growth. Plants use CO2 for photosynthesis and this supplies the water with essential oxygen. They prevent algae growth, remove pollutants, provide hiding places and reduce germs.

Efficient enrichment of the aquarium water with CO2:

The CO2 gas enters the lowest module through the CO2 supply hose in the middle of the reactor. There it enters the bends of the CO2 reactor in bubbles (visible and thus countable) and rises upwards in a circle, like in a car park driveway. On this long path, the CO2 dissolves from the CO2 bubbles in the aquarium water. In this way, the CO2 system supplies the aquarium plants with their main nutrient, carbon dioxide.

Why don't the CO2 bubbles dissolve completely?

On their way up, the bubbles release CO2 into the aquarium water, but at the same time absorb other gases from the water, because these gases are more concentrated in the aquarium water than in a CO2 bubble. Therefore, the CO2 content in the bubble decreases and, for example, the oxygen and nitrogen gas content increases. At the end of its journey through the CO2 reactor, it has clearly become less, but it only contains as much CO2 as the surrounding water and all the gases that are also contained in the aquarium water.

Extension

If the desired CO2 content is not achieved even though the bubble count has been increased, the reactor can be extended by adding further modules. This extends the path for the CO2 bubbles and more CO2 can be added. The only limitation is the height of the aquarium.

Features	
Product name	JBL PROFLORA CO2 TAIFUN SPIRAL 10
Art. No.	6468500
Animal species	Arowana, Axolotl, Barbels, Bettas, Bichirs/reedfish, Blowfish, Cichlids (South America), Crayfish, Danions, Discus, Dwarf shrimps, Flowerhorn, Goldfish, Gouramis, Guppy, Juvenile fish, Killifish, Livebearers, Loaches, Panchaxes, Rainbowfish, Snails, Spiny eels, Tetra, Veiltails, freshwater butterflyfish

Features	
Animal size	For all animal sizes
Animal age group	All aquarium fish
Volume of habitat	40-400 l
Material	plastic (PC)
Food type	-
Colour	transparent / black
