

NEW

# JBL Reptil LED Daylight 13W

LED daylight lamp with full spectrum for terrariums

Suitable for:

- Energy-efficient LED daylight lamp without UV for lighting terrariums and plants with high colour rendering index CRI of >90
- Simply screw into the E27 socket and switch on. Renew after 4 years
- 5000 K colour temperature and PAR value 102  $\mu\text{mol}/\text{m}^2/\text{s}$  for perfect plant growth and beautiful animal colours
- Supplement with UV spot/L-U-W lamps for animals that require UV light, or with a heating mat for animals that only like warmth. Ideal distance lamp/animal: 30 cm
- Packaging contents: 1 LED lamp 13 W with full spectrum daylight and 1520 lumen & PAR 102  $\mu\text{mol}/\text{m}^2/\text{s}$  light output

## Product information

The lighting of your terrarium depends on the light requirements of your animals:

- Do your animals need a lot or little light?
- Do your animals need UV radiation or not?
- Do your animals need a different temperature during the day than at night?
- How far away are your animals from the light source?

The answers to these questions will help you deduce what kind of lamp and possibly additional heating mat your animals need. Lamps such as the JBL Reptil LED Daylight are ideal for illuminating terrariums with plants.

If the animals need additional UV, add a JBL UV-Spot Plus or a JBL L-U-W lamp. These also simultaneously produce heat. For animals that do not require UV (such as many amphibians), the JBL Reptil LED Daylight is ideal and should then be supplemented with heat-generating technology depending on the animal. For amphibians from colder regions, simply omit the heat-generating technology.

The PAR value says something about how much radiation of the lamp can really be used by the plants for photosynthesis. PAR is the abbreviation for Photosynthetic Active Radiation. The value of over 100 PAR measured at a distance of 20 cm shows that the lamp promotes the growth of terrarium plants very well.
