JBL PROTERRA FLORSIL

Staple food with flowers. For all tortoises

Suitable for: 

- 56 % flower content for a balanced diet, as tortoises are extremely fond of eating flowers in the wild
- High acceptance due to the natural colours of the dried flowers. Turtles react strongly to bright colours. The best food is of no use if the turtles do not accept it!
- Healthy mixture of wild growing flowers and pure vegetable, extra flat sticks, as only the mixture leads to a species-appropriate diet
- Contains: dried flowers (e.g. hibiscus, marigolds, sunflower petals) and vegetable feed sticks (alfalfa, spinach, rosemary, basil, etc.) with minerals and natural vitamins. Without added colourings and preservatives
- Package contents: 1 water and light-proof tin, sealed for freshness with flower and green food sticks (1-5 cm). Dosing aid in lid

JBL PROTERRA FLORSIL

Product information

Treat your tortoises with healthy food

Tortoises are gourmets and certainly won't eat everything. However they do enjoy some foods they shouldn't eat at all. Tomatoes, citrus fruit and flesh are unsuitable. The composition of the JBL PROTERRA food range was developed in cooperation with Dr. Petra Kölle at the University of Munich and with specialist turtle breeders. Palatability trials showed that tortoises unambiguously prefer food from the JBL PROTERRA range to all the foods offered. Because even if a food is nutritionally perfectly composed it firstly needs to be accepted by the animal!

The natural smell and in particular the colours of the dried flowers create an enormous acceptance, even with very picky tortoise species. JBL PROTERRA FLORSIL is the ideal complete food for your tortoises. Of course you can also collect green plant food and herbs to supplement their basic nutrition in summer. The other JBL PROTERRA foods VEGABIL, FRUCTIL and HERBIL are an ideal and species-appropriate supplement to JBL PROTERRA FLORSIL. Tortoises like variety.

Turtle species for which this food is ideal (examples):

- Red-footed tortoise
- Star tortoise
- Leopard tortoise
- Marginated tortoise
- Hermann's tortoise
- Spur-thighed tortoise
- African spurred tortoise
- Four-clawed tortoise

JBL expeditions often visit turtle habitats, be it in the deserts or, even more frequently, in the wetlands of the tropics. The observations of their way of life and eating habits are incorporated into the development of the JBL foods. This information directly from the wild is extremely valuable, as it would otherwise hardly be available.

The aim should always be to care for the animals in a species-appropriate way and ideally to provide for offspring in order to reduce the removal of species from the wild. Although breeding is not absolutely necessary for some species, as the species relevant to the trade come from offspring or are not endangered, JBL nevertheless considers it desirable to breed pets.
